## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to a pneumatic fastening tool comprising a piston and a hammer mounted on the piston for driving engagement with a fastener device, classified in class 173, subclass 130.
- II. Claims 18-23 drawn to poppet valve member comprising a distal and proximal ends; first and second annular grooves formed in the distal and proximal ends, classified in class 251, subclass 212.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions as set forth above in the two groups rely upon particulars for patentability, which are not set forth in the other groups.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Nicholas, Pandiscio on 5/7/2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 3721

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
